

Here, I am going to use Virtual Box Software for creating a virtual machine.

Steps:

- * Go to Browser and Search for Virtual Box
- * click on the VM Virtual Box (<https://www.virtualbox.org>)
- * Download it.
- * After visited ~~the~~ clicking on the windows next, you can see the file to start download.
- * After downloading, go to download and install it.
- * A setup wizard dialog box will be opened.
- * custom Setup and location where the Virtual box.
- * After setting the location click next.
- * A warning for network interface will be shown.
- * Then, on the next page click install.
- * After losing the virtual box setup virtual box window.
- * After the steps the VM box installed.

Step to create VM:

- * open virtual box.
- * click new
- * Enter name of the VM, location, and type of VM and Version.
- * Allocate the hardware size and no of processors, and click next
- * After finishing the above the steps, a Summary will be displayed and click finish.
- * For shrinking or expand the size of harddisk go to tools → virtual Media player and click it.
- * By clicking on it, the information will be displayed
But we can expand the disk size but can't shrink below the minimum size of the hard disk
- * At last the VM is created.
